この解答は，AI を用いて作成された。

解答例１：人事評価のＡＩに関する解答

Manager： We are planning to introduce a new AI system that can monitor every employee's performance in real time and automatically assign daily tasks based on their individual productivity levels.

Employee： I'm worried that such a system will make us feel like we're being constantly watched. If our every move is tracked by machines, the workplace will become extremely stressful and lose its sense of mutual trust.

Manager： I understand your concern, but the system's primary goal is to eliminate unfairness and maximize our overall output by ensuring everyone works at their full potential without any wasted time or effort.

Employee： I see your point, but don't you think you're prioritizing efficiency over people's feelings ?

解答例２：カスタマーサポートのＡＩに関する解答

Manager： We are planning to introduce a new AI system that replaces our human support staff with advanced chatbots capable of handling multiple customer inquiries simultaneously 24 hours a day.

Employee： While that sounds innovative, I am concerned that customers with complex or emotional problems will feel frustrated if they cannot speak to a real person who understands their unique situation.

Manager： That may be true, but the system will significantly reduce waiting times and operational costs, allowing us to provide instant responses to thousands of users at once.

Employee： I see your point, but don't you think you're prioritizing efficiency over people's feelings ?

解答のポイント

- AI の機能としては，後の「感情」に繋がるように，人間関係やコミュニケーションに関わる機能が設定した方が書きやすい。
- **Employee** には，提示された AI の機能に対して，説得力のあるデメリット（特に人間の感情や信頼に関するもの）を指摘させる。
- **Manager** には，その意見を一度受け止めるクッション言葉を使いながら，最後の Employee のセリフにある「効率（efficiency)」に直結するメリット（時間の節約，コスト削減，迅速な処理など）を主張させる。その主張が人間の感情よりも効率性が重視されすぎているようにしなければならない。
